DETAILED ACTION

Claim Rejections - 35 USC § 102

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 60-61, 63-66, 75, 78, and 80-83 are rejected under 35 U.S.C. 102(e) as being anticipated by Ji '059.

Ji discloses a process for recovering a precious metal from a precious metal-containing material, comprising: providing a heap of the precious metal-containing material (Column 15, Lines 54-67); and passing a thiosulfate lixiviant and molecular oxygen through the heap to form a pregnant leach solution comprising dissolved precious metals, wherein the molecular oxygen is at a pressure greater than its ambient atmospheric pressure before introduction into the heap (Column 2 Lines 45-67). Ji teaches the leach slurry pH is preferably less than 9, the ammonia concentration is less than 0.05 M and the copper ion concentration is no more than 15 ppm (Column 2 Lines 45-67 – Column 3 Lines 1-3).

Response to Arguments

Applicant's arguments with respect to claims 60-61, 63-66, 75, 78, and 80-83 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

Claims 62, 67-74, 76-77, and 79 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
